

Boilers 1 & 2 (commonly referred to at the site as Unit 1 & Unit 2) have a thermal de-NOx system (SNCR), fabric filter/baghouse, hydrated lime and dry sorben injection (limestone) injection system each.

The units share a common stack, but have separate measurement ports so testing for each unit is specific to that unit only (stack testing, CEMS, RATA).

LEGEND

- EXISTING AC PAVEMENT
- RAILROAD TRACKS
- PROPOSED LEASE BOUNDARY
- P OVERHEAD POWER LINES
- CPT CONE PENETRATION TEST
- B BORING
- G NATURAL GAS
